Green Bay Metro Fire Trains on New Firefighting Tactics

Why: Underwriters Laboratory (UL), the National Institute of Standards and Technology (NIST), and Fire Department, City of New York (FDNY) teamed up to do a series of fire tests in buildings to study fire behavior. Their research showed and tested new ways to attack a fire that can actually increase occupant survivability and also make it safer for firefighters. The Green Bay Metro Fire Department has revised our Standard Operating Guidelines and will be practicing some of the techniques during the upcoming training.

When: February 14, 18, 24 Please call for specific times.

What: All firefighters will have an opportunity to cycle through live fire training evolutions to put the new firefighting tactics to use and become proficient with them.

Where: Northeast Wisconsin Technical College Burn Tower located at 2565 Larsen Rd. across from the Green Bay Botanical Gardens
